**Dark Skin**

Dark skin can often be multi-tonal and therefore it is necessary to balance out the skin tone as part of the base application process. Commonly referred to as colour correction – this process involves certain colours to “neutralize” the appearance. Peach, orange and red concealers generally work best to neutralize the appearance of purple/dark brown discolouration. For eyeshadows, you can have fun with jewel-tones and metallic hues such as copper. Try blush products in burgundy, deep pink or orange and red tones to lift the complexion. With lips, dark skin works well with fuchsia, chocolate brown, bronze tones and deep reds.

**Hair**

Embrace your curls, keep them moisturized. Switch to free products and collections meant for curls.
